These stone variations can be used as the 100% top wear course for Flexi-Stone products (FS500, FS1000, FS2000 & FSX2000). They can also be used in our flagship product Flexi-Pave (HD1000, HD1500, HD2000, HD2000+ & HDX2000) to replace the standard grey granite chips that are mixed with our colored crumb rubber. Mixing the 20 base colors of crumb rubber with 1 or 2 of these 49 stone varieties provides nearly 2000 distinctly different color options for Flexi-Pave. Architectural aggregate options are subject to change without notice based on quarry availability. See also our Standard Flexi-Pave Color Palette to evaluate the rubber colors for mixing and matching with these stone varieties. Feel free to call, click or have us come by your office for more information.
